

How To Set Up Your Securly Parent Account

First, you will need to download the Securly app on your Android or iPhone.

Click "Login," enter the email address we have on record for you, and click "Get instant access." You will then receive an email with a link at that address.

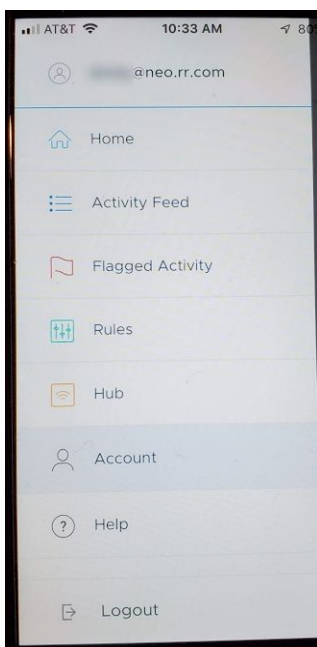

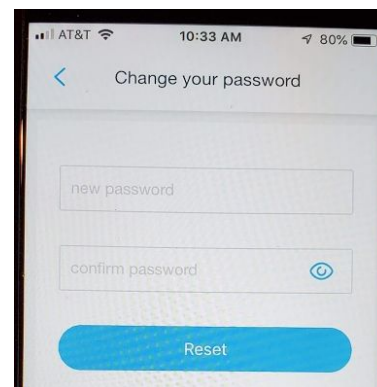

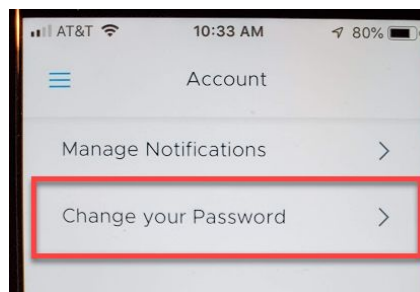

Once you are logged into the Securly App, you will see a home screen that will allow you to navigate.

Click on the three lines at the top left of your screen to open up additional controls.

Here is a [link to the Securly website](#) that explains how these controls work.

Click on “Account” to “Change your Password”

You will have the ability to customize additional rules at home and block certain websites.

You will also have the ability to “Pause the Internet” which will render the device unusable. For example, if you would like your child to not have access to their Chromebook at night, you can click the “Pause Internet” button at the bottom of your app at whatever time you decide is appropriate, select the account(s) you want this to apply to, and then click again to unpaue on the account(s) when you want access to resume.

If you have any further questions, please contact help@securly.com.
